

## **Backend Developer 1 – Bhuvananayaki S**

### **Core Setup & Authentication**

- Setup server.js, .env, and MongoDB connection (db.js).
- Configure **JWT authentication** (signup, login, logout).
- Create **User model** with roles (admin, seller, user).
- Implement **auth routes** (register, login, logout, profile).
- Add **authMiddleware** for role-based access.

### **Communication**

- Build **Message model** (sender, receiver, product, content, timestamp).
- Implement **Message routes** (send message, get conversation, delete message).
- Prepare base for **real-time chat (Socket.io in future)**.

## **Backend Developer 2 – Srimoulidharan M**

### **Product & Category Management**

- Create **Product model** (title, description, category, price, images, status).
- Implement **Product routes** (CRUD, search, filter).
- Integrate **Cloudinary + uploadMiddleware** for images.
- Create **Category model** and related routes (add/list/delete categories).

### **Wishlist**

- Create **Wishlist model** (user, product reference).
- Implement **Wishlist routes** (add, remove, view wishlist).
- Connect wishlist with **User model**.

## **Backend Developer 3 – Neha Rithanya V P**

### **Admin & Reports**

- Create **Admin controller & routes** (manage users, approve/decline products).
- Create **Report model** (reporter, product, reason, timestamp).
- Implement **Report routes** (submit report, review, resolve).

### **Reviews & Dashboard**

- Build **Review model** (reviewer, product, rating, comment, date).
- Implement **Review routes** (add, update, delete, list reviews).
- Extend **Admin dashboard APIs** (user stats, product stats, reports summary).
- Add **logging & monitoring** (logger.js).
